

Britain's Health Advisory and Recovery Team Leads Call for Suspension of Boosters

Open Letter Urges Halt of Injections While Death Probe is Undertaken by Secretary of State for Health and Social Care

Britain's Health Advisory and Recovery Team co-chair Dr. Claire Craig supported by the UK Medical Freedom Alliance, and Children's COVID Vaccine Advisory Council issued this joint open letter to **Victoria Atkins, MP, Secretary of State for Health and Social Care on February 6, 2024**. This letter was appended with dozens of physician-scientist signatures.

To: The Right Hon Victoria Atkins, MP, Secretary of State for Health and Social Care

CC: Dame Jenny Harries, CEO UKHSA; Professor Sir Christopher Whitty, CMO; Maria Caulfield MP

Dear Ms Atkins

Re: Urgent Review of Excess Deaths

Firstly, congratulations on your recent appointment as Secretary of State at the DHSC.

Your three months in office have given you time to see for yourself how much the NHS is struggling; with rising waiting lists, low staff morale and the devastating strike action. You will also be aware of the ongoing and concerning excess deaths in the UK, recently **debated in Parliament**. The fact that this is occurring in many Western countries and across all age groups, particularly younger adults for whom there were no excess deaths during 2020, should trigger alarm bells and prompt an urgent investigation.

In addition, in parallel with increased deaths, there has been a significant rise in **levels of sickness** and disability recorded throughout the working age population. This has resulted in not only increased demands on the health service, but also has impacted the health and resilience of NHS staff themselves, with resulting high levels of staff sickness and absence, causing additional strain on an already struggling system.

The causes of excess mortality and morbidity are likely multifactorial, including the physical and mental impacts of lockdowns, delays in accessing treatment and long-term effects of Covid-19 itself. However, a fourth potential factor appears to be being deliberately ignored: that is, any possible role of the mRNA Covid-19 vaccines. The timing of the rise in disabilities and deaths should make the vaccinations a definite suspect. As early as November 2020, many scientists and doctors, including those in UKMFA, were highlighting the **potential risks** of a rushed vaccine.

Until this question has been thoroughly investigated, it is premature and reckless to be talking of using mRNA technology for future prophylactic vaccines (we take no view on the development of mRNA vaccines for their previously-intended role as *therapeutic* anti-cancer agents). We are concerned that the Government is focused on the business opportunity for

the UK, offered by the expansion of use of these technologies, but are ignoring potential risks to public health from these products, particularly to the immune and cardiovascular systems. The failure of COVID vaccines to stop viral circulation is obvious to all. The obviousness of this failure, along with growing concern about the products' safety – evidenced by poor uptake among those eligible – is undermining public trust in vaccination more generally, including where it is indubitably useful. We have written repeatedly to the **MHRA**, the **CMOs**, the **JCVI**, and to your **predecessor**, regarding the many **risks** of rolling these vaccines out to children. Members of the Pandemic Response All Party **Parliamentary Group** also **wrote** a letter in January 2022, over two years ago, regarding increased all-cause mortality in 15–19-year-old males.

The first three signatories on this letter were all asked by Baroness Hallett to provide Witness Statements for Module 4 of the UK Covid-19 Public Inquiry; these we have recently submitted, only to learn that the date for the Module 4 hearings has been inexplicably and disappointingly postponed, likely until after the general election.

In the interim we therefore call upon you to suspend the booster programme, pending an immediate review into all aspects of Covid vaccine safety, as outlined in our [letter to the MHRA](#) a year ago.

The health of the nation's citizens is of paramount concern and must surely be a high priority for an incoming Minister. We entreat you to apply the precautionary principle regarding the use of these products, which have been linked (in published scientific literature, adverse event databases and real-world epidemiological data) to numerous short- and long-term safety issues, particularly after multiple doses. Pausing their use is now becoming widely recognised to be the only rational, responsible and morally justifiable course of action.

We wish you well in the challenging job you have ahead.

Yours sincerely

Dr Clare Craig, BMBCh, FRCPath
Diagnostic Pathologist
Co-chair, HART

Dr Elizabeth Evans
MA(Cantab), MBBS, DRCOG
CEO, UKMFA

Dr Ros Jones, MD, FRCPCH
Retired Consultant Paediatrician
Convenor, CCVAC

Open letters such as these are important all over the world because they prompt actions that should be taken, provide notice to the public that concerns are real, and take away plausible deniability for political leaders concerning the COVID-19 vaccine safety debacle.

Hurrah!!!

At last! The first rung in the ladder to calling this out publicly! Heads should bow in shame for all governments involved. My head is bowed in respect to the people that have been killed or maimed by these jabs 😊

I'm (thankfully) not English, so the letter comes off as rather stuffy and formal to me. The soft pleading call for the 'precautionary' principal, when hundreds of thousands are now laying cold in their coffins, seems a bit lax. Dear Ms Atkins: These injections are bio-weapons. Can you say "POISONS"? Can you say: "DEAD" people? Can you say: Government sponsored "GENOCIDE"?

I'd never make it in politics...
